Here is your routine organized into a clean, easy-to-read table to keep those positive vibes going.

🚀 Weekly Growth & Mastery Routine

Day	🐍 Language Focus	🧠 Problem Solving	🏗️ Core Engineering
Monday	Python	2 DSA Problems	Distributed Systems
Tuesday	Python	2 DSA Problems	Distributed Systems
Wednesday	Python	2 DSA Problems	Testing Frameworks
Thursday	Java	2 DSA Problems	Project Work
Friday	Java	2 DSA Problems	Project Work
Saturday	Python & Java Recap	DSA Review	Project Audit

✨ Pro-Tips for Success:

- **The "Two-Problem" Rule:** For your DSA count, try to pick one "Warm-up" (Easy) and one "Challenge" (Medium) to keep your momentum high without burning out.
- **Active Testing:** On Wednesday, try writing a test for a Python script you wrote on Monday. It's a great way to bridge those two topics.
- **Saturday "Deep Dive":** Use your review day to look at your DSA solutions from earlier in the week and see if you can optimize the **Time Complexity** () or **Space Complexity** ().

Would you like me to help you find some specific Distributed Systems topics or Project ideas to fill in those slots?
